7/14/15

ABSTRACT OF THE DISCLOSURE

Insert A1

The picture signal picked up by a MOS sensor 2a in the camera 2 is supplied to the storage medium body 3, converted to image data by the A/D converter 4, then digitally processed by the image processor 5 to be still image data or compressed image data composed of R, G and B image signals for example, and then written into the RAM 7. Write of the image data to the RAM 7 is made by access to the RAM 7 according to the directory structure in the ROM 6 and RAM
